FEMTO-LASIK PROCEDURE

FemtoLASIK, also known as bladeless LASIK, is a highly precise and safe vision correction procedure. It involves creating a corneal flap using a Femtosecond laser, followed by refractive correction with an Excimer laser. This advanced technique allows the Refractive Surgeon to customize the treatment based on each patient's unique eye characteristics and vision needs.

RM 6,500

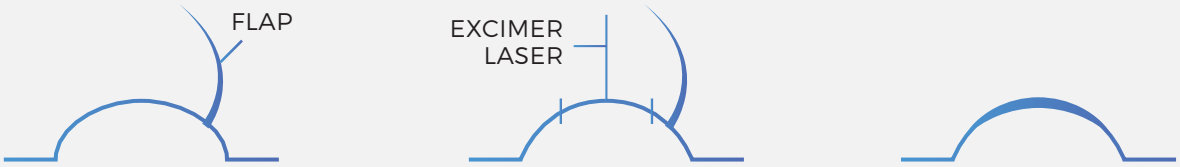
~~RM 8,000~~

What is the PROCEDURES?

1. In FemtoLASIK, a Femtosecond laser is used to create a corneal flap.
2. The flap is then gently lifted to expose the underlying corneal tissue.
3. An Excimer laser is used to reshape the cornea, correcting the eye's refractive power.
4. Once the reshaping is complete, the flap is carefully repositioned in its original place.

Benefits of FEMTOLASIK

- More precise flap creation
- Less Discomfort
- Faster Recovery
- Lower risk of complications
- Highly Customizable



Step 1:
Corneal flap created by Femtosecond laser

Step 2:
Customised laser used to correct existing eye power

Step 3:
Corneal flap replaced back to original position
